CAREER SUMMARY

Creative and skilled software developer with over 6 years of working on personal projects and learning new technologies. Highly organized, self-motivated, and proficient in many technologies. Looking for opportunities to develop code and support teams with my coding skills.

SKILLS

JavaScript, Python, Node.js, React, Redux, Express, Flask, PostgreSQL, Sequelize, SQLAlchemy, HTML, CSS, Linux, Alembic, REST APIs, Pair Programming, Object Oriented Programming

PROJECTS

TwittR | *(React, Redux, Python, Flask, PostgreSQL)*   **live** | **github**

This application is a clone of Twitter that allows you to keep in touch with your friends and family, users are able to post tweets and share them with their community.

- Designed the user interface **(UI)** and user experience **(UX)** with **ReactJS** by creating custom queries that would allow users to interact with others through tweets and comments based on their models in the database.
- Implemented intuitive navigation using **React** and **Redux** to provide better state management for quicker access of data entries fetched from our endpoints.
- Customized the application using the Glass-Morphism **CSS** design style to allow users to feel calm and relaxed.
- Utilized **AWS S3** to facilitate endpoints for users to upload their images and attach it to their tweets.

HeirBnB | *(React, Redux, Python, Flask, PostgreSQL)*   **live** | **github**

This application is a clone of Airbnb, this application allows you to search for places to go and enjoy a great time. You are also able to host your own places.

- Configured backend routes by joining queries, reducing database queries, and providing the user a faster way to navigate through the app.
- Integrated **Redux** thunks to allow the frontend to communicate with the backend when a dispatch was called.
- Added **CSS** styling to the components to make the page feel easier and pleasing to navigate.
- Implemented **CRUD** for spots to allow users to be able to create, edit, update, and delete their own spots.

Kuora | *(React, Redux, Node JS, Express, Sequelize, PostgreSQL)*   **live** | **github**

This application is a clone of Quora, this app is a question-and-answer website where people go to find information.

- Developed extensible **React** components that can be reused and improved code readability and efficiency.
- Redesigned **UI** and **UX** to maximize the use and intuitiveness of the **Edit** and **Delete** features.
- Designed a **Postgres schema** to efficiently store stories and comments within the **PostgreSQL** database.

Filmdium | *(Pug, JavaScript, Node JS, Express, Sequelize, PostgreSQL)*   **live** | **github**

This application is a clone of Medium, this app is an open platform where film lovers find dynamic thinking, and where expert and undiscovered voices can share their writing on any film.

- Constructed models, relationships, and queries in the backend using **Sequelize** and **Express**
- Implemented global classes to minimize the use of **CSS** in the frontend.
- Divided the **Pug** code into templates to make that code reusable.

EDUCATION

App Academy, Full-Stack Software Engineering Course | Online | Feb 2022

Coding boot camp prioritizing the fundamentals of web development such as OOP, TDD, and scrum methodologies
